

Webinar: An Introduction to Sustainability

13/14 September 2023

Buildings represent around 40% of global greenhouse gas emissions including 28% in operational emissions and 11% in building materials and construction. Reducing carbon emissions in buildings is therefore critical to achieving net zero emissions by 2050.

While the UK has a net zero by 2050 target, London's Mayor has set a more ambitious target of reaching net zero by 2030, as well an ambition to double London's green economy to £100 billion and 0.5 million green jobs by 2030.

This webinar, part of a series by the [Local London Green Jobs & Skills Partnership](#), provides an introduction to sustainability and what the jargon, target and opportunities can mean for you.

Mark Jenkinson is Founder of Crystal Associates, an independent consultancy helping cities, communities, colleges, and businesses to be smarter and more sustainable. Jo Tasker has 26 years' experience in the built environment, and 10 years across technology and education sectors, linking industry with schools and academia,

So, if you're a student of the built environment, construction, design, or surveying or are interested in sustainability and seizing the opportunities, this is the webinar for you.
